

Training and Courses

ECHA periodically run short courses for Engineers, Chemists and Managers, which cover general industrial microbiology or are tailor-made for specific clients or for specific subject areas. Courses are run at our Cardiff office, or can be run at client's premises anywhere in the world.

Generally we keep delegate numbers to a small number (usually a maximum of 7 people).

Larger courses can be run at other venues, for example a course arranged for the Institute of Marine Engineers in London was attended by over 100 people.

Subject areas

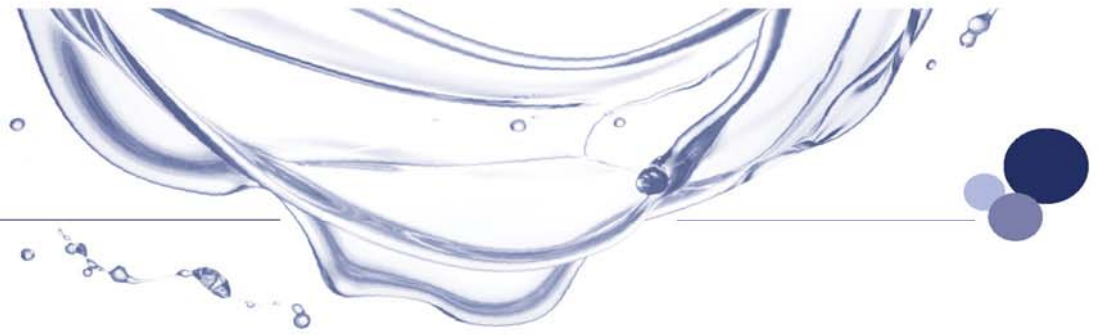

Typical subject areas include:

- Microbiology of aviation fuels
- Microbes in fuels, lub oils and bilges (for marine engineers)

- Microbiological contamination, spoilage and corrosion in oil production and offshore process water systems
- Monitoring and identification of microbes of industrial significance
- Microbiology of metalworking fluids

With most of our courses we assume that attendees have little or no background knowledge in microbiology. However, more technically based courses can also be arranged, for example with emphasis on laboratory testing.

If you have a specific training requirement or would like details of upcoming courses please contact us.
